

Carsten Bogh Juhl is a Physiotherapist (1988), Master of Public Health (2004), PhD in health science (2012). He is employed at Copenhagen University Hospital performing clinical research mainly in orthopedics and lung medicine. Furthermore he is associate professor at University of Southern Denmark and Head of the Master program in Physiotherapy.

Furthermore he is a part of editorial office of the Cochrane Musculoskeletal group; CMSG-Nordic responsible for Cochrane review within osteoarthritis. His main research area is in systematic review and meta-analysis mainly in musculoskeletal disease, but has also performed systematic review and meta-analysis within psychology and the education area.

He is a part of the Evidence-based network (EBR-network) promoting that researchers systematically should include both the end-user's perspective and a systematic approach to summarize and appraise previous research in addition to their own specific context and personal preferences when new research questions are decided on and when setting new results in context with the results of previous studies.
